- TECHNOLOGY FOR SOCIAL IMPACT

Barkat.

Connecting welfare. Making governance visible.

Barkat Project Management Platform

End-to-End Welfare & Donor Governance Suite

A centralized cloud portal for The NGO World (TNW), bridging field operations, partner verification and donor transparency.

THE NGO WORLD × TIME GLOBAL TECH / 2019–2021

CLIENT	DEVELOPER	ENGAGEMENT	SECTOR
The NGO World (TNW)	Time Global Tech	July 2019–August 2021	NGO / Non-Profit Technology / Social Impact

IN BRIEF

Three things to know.

THE ENGAGEMENT

Two years, four releases.

July 2019 to August 2021, with four major production releases documented across the project.

THE PLATFORM

One portal, four roles.

Admin, Field Staff, Donors and Vets work in a centralized cloud platform with secure multi-role access.

THE PRINCIPLE

Governance built in.

KYP profiling and role-based access put verification and accountability inside the product, not around it.

HOW TO READ THIS CASE STUDY

● **Documented**
Capabilities and engagement facts from the supplied project summary.

◐ **Illustrative**
Conceptual views and sequences, not product screenshots or a verified order.

○ **Not measured**
No verified baseline or impact data was supplied, so none is claimed.

01

THE MANDATE

Many moving parts. One shared purpose.

Welfare delivery connects people, partners, assets and accountability.

Barkat brings these coordination needs into a centralized web portal. The platform connects what happens in the field with the oversight administrators need and the visibility donors expect.

This challenge is framed around the documented scope—not a claim about TNW's previous operating processes.

04	Major production releases	Structured, iterative delivery during the engagement.
04	User roles	Admin, Field Staff, Donors and Vets.
120+	Pages of project documentation	Documentation scope reported in the source.

02

THE SHIFT

From disconnected processes to connected capabilities.

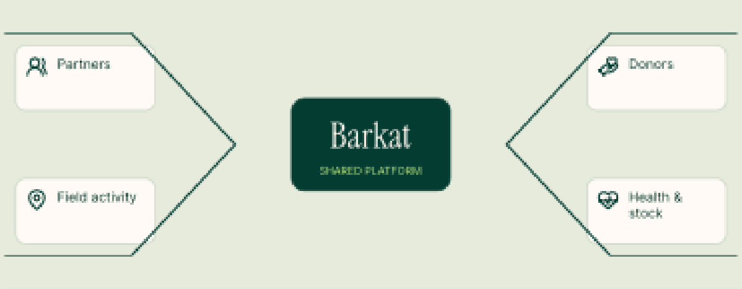
Before Barkat

ILLUSTRATIVE BASELINE

- **Disconnected partner records**
  Partner information considered across separate records.
- **Manually assembled visibility**
  An illustrative need to bring contribution and project information together.
- **Separate health and stock records**
  Animal care and medicine information considered independently.
- **Fragmented handoffs**
  An illustrative model of activities passing between separate roles.

After Barkat

DOCUMENTED CAPABILITIES



- **KYP profiling**
  Document, verify and monitor partners and beneficiary credentials.
- **Donor visibility**
  Project dashboards, contribution tracking, allocations and impact reporting.
- **Integrated veterinary & medicine tracking**
  Health histories, checkups, vaccinations and real-time medicine stocks.
- **Centralized role-based workflows**
  Admin, Field Staff, Donors and Vets connected through one cloud portal.

ⓘ Before-state is illustrative; baseline processes and measured impact were not supplied.

03

THE PLATFORM, IN DETAIL

One suite. Connected responsibilities.

Barkat's scope spans the operational record, the partner relationship and the oversight layer. Each module serves a different part of the same welfare ecosystem.

KYP

Know Your Partner

A documented profile at the center of partner and beneficiary governance.

- Partner organization documentation
- Verification of beneficiary credentials
- Ongoing partner monitoring

FIELD

Field operations

Capture community-level work within the same project environment.

- Beneficiary registration and data collection
- Community project activity logging
- Aid distribution records

DONOR

Donor transparency

Connect contributions and allocations with a view of project activity.

- Project dashboards and contribution tracking
- Allocation visibility
- Impact reporting capabilities

ASSETS

Livestock & partner allocations

Bring partner commitments and agricultural assets into the project lifecycle.

- Livestock allocations to partners
- Partner agreement management
- Agricultural asset lifecycle tracking

CARE

Veterinary care & medicines

Connect animal care records with welfare supplies and medicine availability.

- Checkups and vaccination campaigns
- Livestock health histories and monitoring
- Real-time stocks for clinics and distribution camps

CONTROL

Administration & governance

A shared control layer for access, configuration and organization-wide oversight.

- Secure multi-role user management
- System administration and configuration
- Centralized project management and global reporting

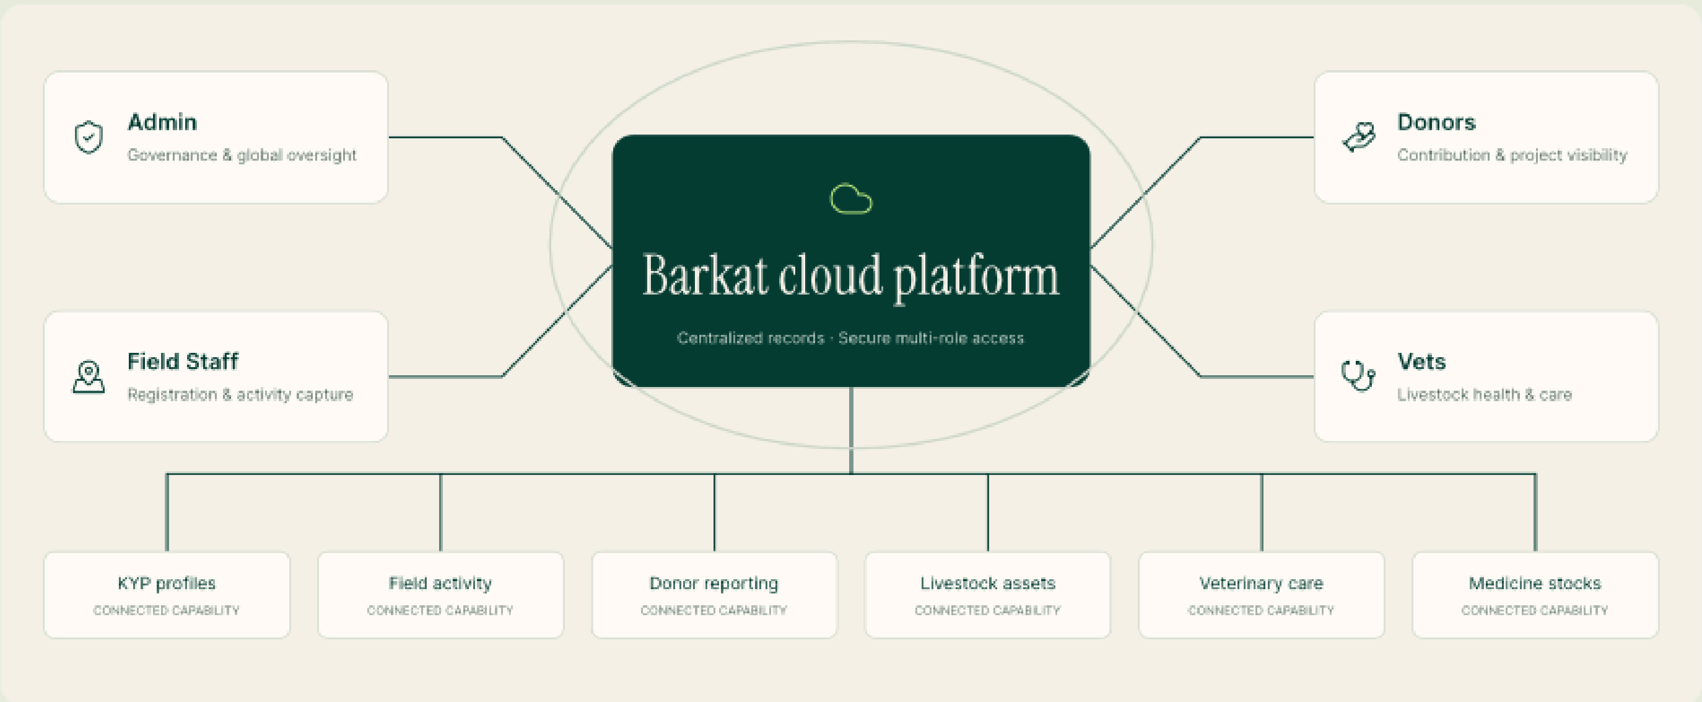
A CONNECTED SCOPE → People → Projects → Assets → Care → Visibility

04

THE CONNECTED SYSTEM

Four roles. A common operational core.

A capability-level view of how role-based access and modules meet in the centralized cloud platform.



ⓘ Conceptual capability architecture—not a technical deployment diagram. No engineering stack or infrastructure specification was supplied.

05

AN OPERATIONAL JOURNEY

Follow the thread of a welfare project.

An illustrative sequence connects the documented capabilities—from the first partner profile to donor-facing visibility.

01 **Profile**
Document partner organizations and register beneficiary credentials through KYP profiling.
PARTNER CONTEXT

02 **Verify**
Verify credentials and monitor partners within the platform's governance capabilities.
GOVERNANCE

03 **Allocate**
Associate livestock allocations and partner agreements with agricultural asset lifecycles.
ASSET ALLOCATION

04 **Record activity**
Log community project activity, beneficiary data and aid distributions from field operations.
FIELD OPERATIONS

05 **Support care**
Maintain health histories, checkups, vaccination activity and real-time medicine stock records.
HEALTH & INVENTORY

06 **Report**
Make project, contribution and allocation information visible through donor dashboards and reports.
DONOR VISIBILITY

ⓘ Sequence is illustrative—not a verified implementation order, mandatory workflow or release-by-release feature history.

06

DESIGNED AROUND RESPONSIBILITY

Shared platform. Purposeful access.

Four documented user roles organize the platform around distinct responsibilities, with secure multi-role user management as the foundation.

Admin

A platform-wide view of projects, users and operational oversight.

- ✓ Manage users and role-based permissions
- ✓ Configure and administer the system
- ✓ Access global reporting

PRIMARY LENS
Governance

Field Staff

The operational connection between community activity and the central record.

- ✓ Collect data and register beneficiaries
- ✓ Record community project activity
- ✓ Log aid distribution

PRIMARY LENS
Delivery

Donors

A dedicated view into contributions, allocations and project information.

- ✓ View project dashboards
- ✓ Track contributions and allocations
- ✓ Access impact reporting capabilities

PRIMARY LENS
Transparency

Vets

A health-focused role within the livestock welfare ecosystem.

- ✓ Record veterinary checkups
- ✓ Support vaccination campaigns
- ✓ Maintain livestock health histories

PRIMARY LENS
Animal welfare

ACCESS AT A GLANCE

Admin sees across. Every other role owns a lane.

A reading of the documented scope: which role works with which connected capability. It is not a permissions specification.

	Admin GOVERNANCE	Field Staff DELIVERY	Donors TRANSPARENCY	Vets ANIMAL WELFARE
KYP profiles	○	●	·	·
Field activity	○	●	·	·
Donor reporting	○	·	●	·
Livestock assets	○	·	·	·
Veterinary care	○	·	·	●
Medicine stocks	○	·	·	·

● Documented role action ○ Oversight via Admin administration and global reporting

READING THE MATRIX

Four of six capabilities map to a dedicated role. Livestock assets and medicine stocks are reached through Admin oversight in the documented scope.

07

DELIVERY OVER TIME

Built through iterative production cycles.

The engagement ran from July 2019 to August 2021, with four major production releases documented across the project.

4

Major production releases

Structured, iterative delivery throughout the engagement.

ENGAGEMENT START
July 2019

ENGAGEMENT END
August 2021

RELEASE	RELEASE	RELEASE	RELEASE
01	02	03	04
Major production release	Major production release	Major production release	Major production release

ⓘ Release markers are schematic. Individual release dates, spacing and feature-by-release details were not supplied.

08

QUALITY & ACCOUNTABILITY

Governance is part of the product.

THE ACCOUNTABILITY LAYER

Access, verification and review.

Conceptual illustration of the documented governance scope.

CONTROLLED ACCESS

Responsibilities made explicit

Secure multi-role user management supports separate Admin, Field Staff, Donor and Vet responsibilities. Administration includes system configuration and global reporting.

PARTNER GOVERNANCE

A profile beyond a name

KYP documents, verifies and monitors partner organizations and beneficiary credentials, placing partner context within the platform's operational scope.

SOURCE-CODE ASSESSMENT

External review, accurately qualified

Third-party source-code assessments are reported in the source. No named assessment standard, certification, test results or benchmark evidence was supplied.

09

WHAT THE PROJECT DELIVERED

A connected foundation for welfare operations.

The delivery story is supported by platform capabilities and engagement facts. The operational impact story would need its own evidence.

DELIVERED CAPABILITIES

A centralized operational record

Cloud project management connects KYP, field activity, livestock assets, veterinary care and medicine stocks.

Role-based coordination

Secure multi-role access supports distinct responsibilities across Admin, Field Staff, Donors and Vets.

A donor-facing visibility layer

Project dashboards, contribution tracking, allocation visibility and impact reporting are included in the documented scope.

NOT MEASURED IN THE SOURCE

Capabilities are not impact metrics.

No verified baseline or numerical operational impact was supplied. This case study does not claim:

- — Time or cost savings
- — Beneficiary or user reach
- — Changes in delivery effectiveness
- — Quantified transparency improvements

ⓘ Evidence basis: the supplied project summary. "120+ pages" refers to project documentation, not beneficiaries, adoption or measured impact.
